La Conner, WA 98257

July 28, 2009

Subj: Phase I Environmental Site Assessments for Tribal Trust Properties on the Swinomish Reservation, La Conner (Skagit County) WA

- 1) Phase I ESA Swinomish North Tribal Economic Zone Area 1
- 2) Phase I ESA Swinomish North Tribal Economic Zone Area 2
- 3) Phase I ESA McGlenn Island and Causeway
- 4) Phase I ESA Front Street Site

To whom it may concern,

In 2007, the Swinomish Indian Tribal Community received EPA funding to conduct a community-wide brownfields assessment. The purpose of the assessment funding was to inventory, characterize, and prioritize brownfields sites on the Swinomish Reservation for clean-up or other actions.

Several general areas were chosen where environmental assessments were appropriate. In 2008 and 2009 the Environmental Management Program of the Swinomish Office of Planning and Community Development conducted four detailed Phase I Environmental Site assessments on tribal trust lands on the Reservation that met criteria as potential brownfields sites. The primary objective of the assessments was to evaluate the subject properties for recognized environmental conditions and, if appropriate, recommend additional testing. For all four areas evaluated, additional testing was recommended and a Phase II assessment, encompassing portions of all four areas, is in progress.

The Environmental Management Program within the Swinomish Planning Office contains several environmental professionals with graduate degrees in the environmental or biological sciences and with experience in evaluating environmental contamination. Because of this resident expertise, the subject Phase I assessments were conducted in-house, both to facilitate a detailed assessment and to conserve grant funding for expected Phase II testing. Additionally, an environmental consulting firm, Environment International Ltd., reviewed the assessments and conducted their own site reconnaissance. This firm prepared the Phase II Sampling Quality Assurance Plan and is currently preparing the Phase II report.

EXECUTIVE SUMMARY

In 2007, the Swinomish Indian Tribal Community (SITC), a federally recognized sovereign Indian nation in northern Puget Sound, Washington State, received EPA funding to conduct a community-wide brownfields assessment. The purpose of this grant was to inventory, characterize, and prioritize brownfields sites on the Swinomish Reservation for clean-up or other actions. Potential sites (all located on tribal trust land) included open dumps, former industrial sites, areas designated for economic development projects, and areas designated for open space. After site reconnaissance and a review of available information, several general areas were chosen where environmental assessments were appropriate. This report addresses one of these areas, an approximately 280 acre section of the Reservation referred to in this report as Tribal Economic Zone Area 2 (TEZ Area 2). This area is located along the west side of the Swinomish Channel, south of SR 20.

To meet the brownfields Phase I investigation requirement for the subject property, the SITC Brownfields Tribal Response Program staff prepared a Phase I environmental site assessment (ESA) for the site. This assessment was performed in accordance with CFR Title 40, Part 312 - Innocent Landowners, Standards for Conducting All Appropriate Inquiries (Final Rule). The report was reviewed by Environment International, Ltd., an environmental consulting firm.

The subject area, at the north end of the Swinomish Reservation, has excellent access to SR 20 and is adjacent to the site of the tribal casino and gas station. The area is a mosaic of freshwater wetlands and drained, previously converted wetland. Most of the property is fee land, purchased by the Tribe and put into tribal trust in 2006. Previous to that it was under cultivation for more than 100 years. Much of the area is still cultivation via lease agreements with non-tribal farmers. The area is a desirable suitable location for future economic development by the Tribe and is zoned for that purpose. It is also the location of several current and planned fish and wildlife habitat restoration projects, including an advanced wetland mitigation project.

This Phase I ESA suggests that there are no likely sources of contamination in TEZ Area 2 which would directly complicate economic development in a significant way. However, several areas should receive further investigation to determine if sources of significant contamination are present that may affect natural resource uses of the area. These areas of potential contamination include the soils below a pile of creosote debris on the dike and wetland sediments that might contain persistent agricultural chemical residues accumulated over more than a century of cultivation, and which potentially could be released during a future planned wetland mitigation project.

Phase I Environmental Site Assessment for the Swinomish Reservation Tribal Economic Zone Area 2 Fidalgo Island, Washington

1.0 Introduction

This report presents the results of the Swinomish Indian Tribal Community (SITC) Brownfields Tribal Response Program Phase I Environmental Site Assessment conducted on approximately 280 acres of tribal trust property on the Swinomish Indian Reservation in Northern Puget Sound, Washington. This property is referred to in this report as Tribal Economic Zone Area 2 (TEZ Area 1). This report was prepared by the SITC Brownfields Tribal Response Program staff, with the assistance of an environmental contractor, Environmental International Ltd., contracted by the Tribe to support its brownfields programs.

1.1 Qualifications of Authors and Reviewers as Environmental Professionals

The Swinomish Brownfields Tribal Response Program falls under the Environmental Management Program in the SITC Office of Planning and Community Development. The Environmental Management staff is composed of the Environmental Management Coordinator, the Air Quality Specialist, and the Environmental Specialist:

Scott Andrews, Environmental Management Coordinator - J.D. University of Nebraska (1997), M.S. Watershed Management and Forestry, University of Arizona (1988)

Felix Basabe III, Air Quality Specialist - PhD Applied Forestry/Pollution Effects, University of Washington (1992), M.S. Applied Biology, Western Washington University (1984). Mr. Basabe has more than 10 years of experience in environmental analysis and investigations dealing with toxic substances and remediation.

Jon Boe, Environmental Specialist - M.S. Environmental Science (wetland ecology), Western Washington University (2007).

Environmental International Ltd. (EI) is a multidisciplinary environmental consulting firm. Assisting in the preparation of this report and its review were:

Valerie Anne Lee, President - J.D. Yale Law School (1984), M.S. Civil Engineering, M.I.T. (1976)

Aron Borok, EI Portland Office manager – M.A. Environmental Policy and Natural Resource Management, Northwestern University. B.S. Environmental Engineering, Indiana University.

1.2 Purpose

The primary objective of this Phase I Environmental Assessment was to evaluate the subject property for “recognized environmental conditions” (RECs). This term refers to the presence or likely presence of any hazardous substances or petroleum products under conditions that indicate an existing release, a past release, or material threat of a release of any such hazardous substance into structures on the property or into the ground, ground water, or surface water of the property (40 CFR Part 312). The assessment is intended to determine whether contamination levels at the site are likely to be *de minimus* conditions that do not present a threat to human health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies, or conditions that require further assessment to make such a determination. In the context of the SITC Brownfields Tribal Response Program, the intended result of a Phase I assessment will be either a “No Further Action Required” letter from EPA Region 10 that will facilitate economic development of the site, or a determination that a Phase II environmental assessment, which includes sampling and analysis, will be required to evaluate the site.

1.3 Scope of Work

In order to accomplish the above objective of the Phase I Environmental Site Assessment, the following scope of work was performed, in accordance with CFR Title 40, Part 312 - Innocent Landowners, Standards for Conducting All Appropriate Inquiries (Final Rule):

- Conduct Environmental Data Review
- Perform On-site Examination
- Interview owners/operators
- Write Phase I ESA to include conclusions and recommendations for future actions.

1.4 Limitations and Exceptions of Assessment

The conclusions in this report are based solely on materials referenced, observations and interviews made in the course of the investigation. No sampling or specific chemical or toxicity testing was done as part of this assessment, although substantial sampling data was referenced from historical testing of the site or areas in the vicinity.

2.0 Site Background and Description

2.1 Location

The subject property is located on the northern end of the Swinomish Indian Reservation, within the boundaries of Skagit County, Washington.

The site coordinates are N48.450161, W122.518400 (the approximate center of the property). The average elevation of the upland area of the site is approximately 10 ft. MSL.

2.2 Swinomish Indian Reservation

The Swinomish Indian Reservation (Fig. 1) encompasses approximately 7,400 acres of uplands, almost 2,900 acres of tidelands, and 420 acres of freshwater wetlands. The reservation is a peninsula located on the southeast side of Fidalgo Island, Skagit County, Washington. It is 95 % bounded by water - by the Swinomish Channel to the east, Padilla Bay to the north, and Skagit, Kiket and Similk Bays to the south and west.

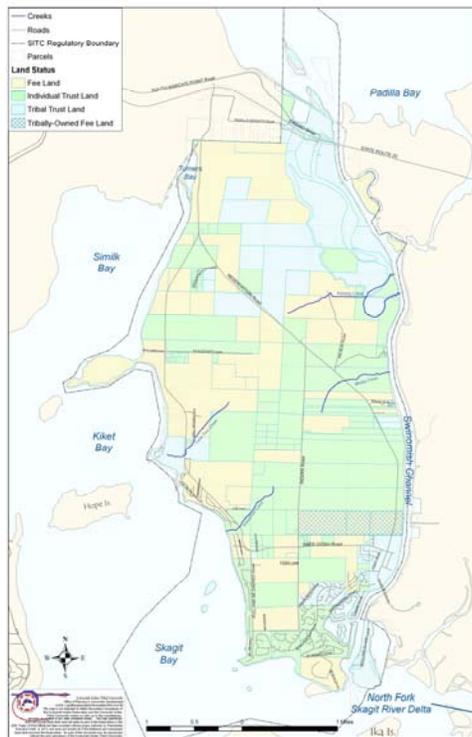

Figure 1. Swinomish Indian Reservation.

The Tribe or individual tribal members own approximately 58% of the non-tidal lands of the reservation, as well as 2900 acres of the intertidal lands surrounding it. The

remaining 42% of the non-tidal lands have passed out of Indian hands into non-Indian private ownership.

Approximately 3,000 residents are estimated to live on the Reservation including approximately 800 members of the SITC or other federally recognized Indian Tribes. Members of the SITC are descendents of the Swinomish, Kikiallus, Samish, and Lower Skagit Tribes. The culture and economy of these peoples were centered on natural resources, including salmon, shellfish, and other marine resources, as well as resources from the uplands. Salmon and shellfish are still a principal resource base. Two hundred fishermen participate in the harvest of salmon and crab, and many others harvest shellfish for subsistence. Shellfish harvest consumption rates by tribal members are estimated to be 20 to 40 times that of the general population, and fish consumption 10 times that of the general population. Because of these consumption rates, contamination of fish and shellfish stocks by toxic materials is a particular concern to the Tribe.

2.3 Physical Setting

Tribal Economic Zone Area 2 consists of approximately 280 acres of uplands (previously converted wetlands) and freshwater palustrine wetlands south of SR 20 and west of the Swinomish Channel (Fig. 2). In the late 1800s dikes were constructed along the western edge of the Swinomish Slough and Padilla Bay to the north to isolate the area from tidal inundation. Natural channels and man-made drainage features drained this area sufficiently for much of it to be used for agriculture. In 1937 the Army Corps of Engineers (ACOE) completed the dredging and straightening of the Swinomish Slough to create the continuously navigable Swinomish Channel between Skagit and Padilla Bays. The subject area is now bounded by the Swinomish Channel to the east, SR 20 to the north, and additional diked and drained lands to the south. To the west, a 120-180 foot bluff separates Area 2 from the forested uplands of the reservation.

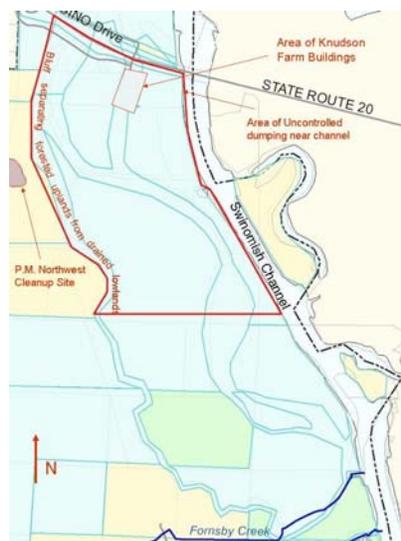

Figure 2. TEZ Area 2. Swinomish Tribal Economic Zone south of SR 20.

Area 2 is tribal trust land, zoned tribal economic. Along the channel just south of the SR 20 bridge spans, there is a small non-tribal mooring. A cluster of three pipeline right-of-ways (2 oil and 1 natural gas) crosses the northern part of the area, several hundred yards south of SR-20, before passing underneath the Swinomish Channel.

Soils: Unfilled areas in Area 2 are composed of drained and un-drained Tacoma silt loam (2007 NRCS soil map). These are classified as hydric soils, poorly to very poorly drained with moderately high saturated hydraulic conductivity. At least 80 inches of these alluvial soils overlays the area. Prior to diking, the area consisted of intertidal marshes and channels. The base of the original dike probably consists of these same silt loam soils; however, sandy dredge spoils were piled along the channel atop the original dike until this practice ended around 1988. Besides the area along the channel, dredge spoils have been deposited in various other locations, mostly in the north and northeast section of the area. At the north end of the area, just east of a roundabout, at least 150,000 cubic yards of fill has been stockpiled for future use in filling areas of Area 2 for economic development. This fill material appears to largely consist of a gravel and clay loam. It was removed from a previously undeveloped, unfilled area in a road widening project on Whidbey Island, and is not considered likely to have contamination issues.

Hydrology: Essentially all of the current uplands in Area 2 are previously converted wetlands. Fig. 3 is an aerial photo of Area 2 from 2007. Fig. 4 is a chart of the historic Swinomish Slough area, dating from 1891.

Figure 3. TEZ Area 2. (Skagit Co. 2007)

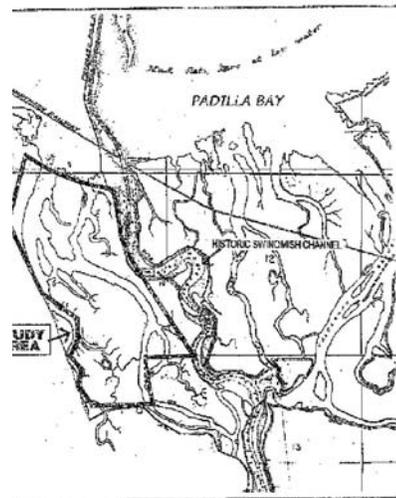

Figure 4. 1891 Chart of Swinomish Slough (Skagit Co.)

Tidal inundation of Area 2 is prevented by the dike along the Swinomish Channel and the current road embankments and filled uplands to the north along Padilla Bay.

Remnant channels, man-made ditches, and probably field tiles drain much of the area through a combination of one-way and self-regulating tide gates to the Swinomish Channel. The water table in Area 2 varies seasonally and with the tide, but in general is very shallow, likely ranging from the surface to 2 feet in the unfilled areas. Freshwater recharge to Area 2 groundwater is primarily from rainfall in the winter and from seeps along the bluff. These seeps are reported to dry up during the summer. Given the shallow water table, the tidal influence, and the drainage features, there is a mosaic of uplands and essentially palustrine wetlands in Area 2. Although the wetlands are almost entirely freshwater, several recently installed self-regulating tide gates, installed to facilitate salmon habitat restoration, are creating a brackish salt marsh component to the wetlands. In conjunction with one of these self-regulating tide gates, a salt-marsh “pocket estuary” was excavated in Area 2 in the dredge spoils along the channel, just south of the pipeline right-of-ways.

Beginning in the late 1800s, this area was extensively modified with dikes, ditches and drainage tiles to create arable land. Further modifications to the area’s hydrology occurred in the 20th century from the filling associated with SR-20 construction and Swinomish Channel dredging. The current large wetland that meanders through the area generally follows the course of a historic slough (Big Slough). A newspaper account from the late 1800s noted that the drained soil was difficult to till; implying that the drained area was likely marshland and not mudflat. This is consistent with the Fig. 4 depiction and other historical accounts referring to the pasturing of livestock that occurred here in the late 1800s. Drained marsh soil typically subsides dramatically as its organic component decomposes and collapses. Because there has been no sediment input into the area (other than fill in some areas), it is likely the elevation of the agricultural lands has decreased substantially over more than 100 years of cultivation. The northeast section of Area 2 is poorly drained and was apparently never cultivated. Some re-grading appears to have been conducted in this area during the last few years, somewhat altering the previous hydrology. The previously mentioned soil stockpile is also now present at this location, and currently covers several acres. Sandy dredge spoils are also distributed in various locations in the northern portion of the area away from the channel. Fill has been deposited in the northern part of the area to permit the construction of an access road from SR 20 to the casino area north of Area 2. The Reservation uplands area north of SR-20 consist almost entirely of filled tidal mudflats.

Area 2 is accessed from SR-20 via the exits that provide access to the casino and gas station. A traffic roundabout (with two of its exits stubbed out) was constructed in the north part of the area in anticipation of improved roads to be built during the course of economic development. Several unimproved roads currently provide access to the area and areas further south.

No buildings are located in Area 2. As many as 8 buildings associated with the Knudson farm in the north central part of the area were demolished in December 2003 (Fig. 5).

Figure 5. Previous Farm structures in Area 2, 2001

Several piles of debris remain from these structures (Fig. 6), and other debris may be covered under the piles of earth located near the locations of former buildings and throughout the northeast section of the area. The previous owner (Mr. Chris Knudson) did not know of any water wells, dry wells, solid waste or dumping sites, pesticide or fertilizer storage areas, or other chemical storage or disposal at the site. It is likely some well existed in this area to support farm operations, but currently there is no potable water source in the area. Potable water for future development would be obtained from the nearby City of Anacortes water line.

Along the channel there is a large pile of creosote treated wood debris along with some empty containers of wood preservative (Fig. 7). Near the mooring location some debris from a former dumping site is still visible on the ground (Fig. 8). A derelict fiberglass boat was recently illegally dumped near this site.

Figure 6. Farm demolition debris.

Figure 7. Creosoted timber pile.

Figure 8. Previous dumping site near bridge.

2.4 Ownership

The land was originally diked and brought into cultivation in the late 1800s by the Swinomish for their own use, likely under the direction of the BIA. Mr. Chris Knudson, in a 1998 interview, stated that his father purchased the lands around 1918, and said that the area has generally been in cultivation since that time. Howard Knudson Farms owned the land in Area 2 prior to its purchase by the SITC in 2000. The property became tribal trust land in 2006.

2.5 Current use of Properties Adjoining Area 2

North: SR 20 bounds the area to the north. North of the highway, the tribal casino, gas station and RV park are located on filled tidelands bordering Padilla Bay.

West: A 120-180 foot bluff borders the west edge of the area. Atop this bluff are mostly forested uplands within the reservation.

East: To the east the Swinomish Channel forms the eastern boundary of the reservation. Across the channel there is some commercial property to the north of SR 20 and primarily diked and drained agricultural lands to the south. There is some residential development along the east side of the channel, south of area 2.

South: Primarily diked and drained current or former agricultural lands, wetlands, and some residential development. A significant amount of this land was also recently purchased by the tribe and has transferred into tribal trust.

2.6 Current use of the site

Most of the better-drained portions of the site are leased to a farmer and under periodic cultivation. Much of the area, however, is either true wetland or otherwise too wet to farm.

A salmon habitat restoration project (a “pocket estuary” excavated into the dredge spoils along the channel which incorporates a self-regulating tide gate) is in progress on the east side of the property (Figure 9).

Figure 9. “Pocket Estuary” salmon habitat restoration project.

Approximately 150,000 cubic yard of soil from an off-reservation construction project is being stockpiled near the northeast corner of the site (Figure 10) for future use as fill in Area 2. A smaller pile of dredge spoils (several thousand cubic yards) excavated as part of the salmon habitat restoration project is stockpiled along the channel, 200 yards south of the larger pile (Figure 11).

Figure 10. Fill Stockpile.

Figure 11. Restoration excavation material.

2.7 Planned Future Use of the Site

Construction of a large salt water marina accessed from the Swinomish Channel has historically been the Swinomish plan for this area and remains a potential option. An environmental impact statement was prepared in conjunction with this plan in the mid-1990s. Current development plans for Area 2 appear more likely to involve retail establishments, potentially including a large retail store. The three pipeline right-of-ways crossing the northern part of the area potentially complicate road access and development. Additionally, since almost any significant development in Area 2 involves filling, excavating or otherwise altering some existing wetlands, wetland mitigation is anticipated in conjunction with economic development in Area 2. In the southern portion of Area 2, and extending south outside of the area, are additional diked lands that are set aside to be restored as salt marsh areas in an advanced mitigation project for wetlands lost or altered due to economic development.

Under the Swinomish Tribal Code, a wetland's class determines the amount of mitigation required when it is altered. The Tribal Code classifies wetlands into one of three categories based on function and value. For example, one acre of Class 1 wetland (the highest quality category) requires six replacement acres of restored or created wetland for mitigation. Additionally, the Code has a requirement that projects conform to the standards of the Federal Clean Water Act, 33 USC §§ 1251 -1387, and additionally not cause increases in "temperature, nutrient levels, turbidity, sediment load, or decreases in dissolved oxygen, or adverse modifications to pH, salinity, and conductivity characteristics of marine or fresh water that either: (1) violate Tribal or Federal water quality standards; or (2) adversely impact fisheries or habitat."

3.0 Previous Reports

This area has been included in several Phase I environmental assessments beginning in 1998, as well as several other environmental studies.

3.1 1998 Phase I Assessment.

A Phase I environmental assessment was performed in 1998 by Hong West Associates Geosciences Inc. (HWA), when the area was part of a planned marina development project to be operated by the Swinomish Tribe. In 1998 the Tribe had not yet purchased the lands in Area 2. The assessment also addressed agricultural non-tribally owned fee lands south of Area 2 that the Tribe was purchasing.

On-site concerns included some soil contamination associated with above ground fuel tanks, some unregulated dumping (including used motor oil), and historic storage and use of agricultural pesticides.

Off-site concerns included the PM Northwest Dump site, which was listed as a potential source of contaminants for Area 2. The PM Northwest site, although never listed on the National Priorities List as a Superfund site, underwent a USEPA supervised CERCLA cleanup in 2001 - 2002. Surface water and sediment samples collected from wetlands in Area 2, down gradient of the PM Northwest site, were found to contain elevated levels of metals, VOCs and petroleum hydrocarbons. After the P.M. Northwest site underwent cleanup, follow-up sampling was conducted in 2002. After this sampling, it was concluded that metals, VOCs, SVOCs, and PAHs detected in wetland sediments and surface water were due to natural or anthropogenic sources and not the up gradient PM Northwest site, due to the fact that background samples (from similar areas along the bluff but further south) had somewhat higher concentrations of these analytes than the samples down gradient from the cleanup site.

The 1998 assessment concluded that none of the potential sources of contaminants in Area 2 presented a hazard to human health or the environment based on existing information. In the report's recommendations it was noted that "sampling and analysis may be recommended to confirm the presence of contamination in areas where future land use may result in some increased risk or impact by contamination, such as shellfish rearing/harvesting, etc." The report also noted that "Evaluation of potential chemical impacts to the planned development (e.g. effects of pesticides or nitrates on habitat restorations, marina development, etc.) is outside the scope of this assessment."

3.2 2000 Phase I Assessment.

An updated Phase I assessment of Area 2 was conducted by HWA in 2000. No significant changes were observed between the 1998 and 2000 assessments.

3.3 2006 Phase I Assessment.

In 2006 HWA performed another Phase I assessment that included parcels in Area 2. This assessment was required by the federal government when parcels north and south of SR 20 that had been recently purchased by the SITC were to become tribal trust lands. Structures associated with the previous agricultural use of Area 2, including barns and trailers, had been removed or demolished in December 2003, under a permit issued by the SITC. Fills, vents, and other indications of underground storage tanks were not observed. Above ground tanks observed during the 1998 and 2000 assessments near the southern part of Area 2 had been removed by an environmental contractor (the Stratum Group), and petroleum contaminated soils beneath those tanks was removed.

Debris near the channel, close to the highway bridge and probably partially in the road right-of-way, was observed. This material has since been removed by SITC Public Works.

No Phase II sampling was performed or recommended.

This assessment considered the following potential contaminant issues in Area 1:

- oil and gas pipelines
- disposal of concrete, timbers, tires, debris, vehicles, etc
- historic use and storage of agricultural chemicals

None of these issues were considered to currently represent a hazard to human health or the environment based on existing information, with the following explanation:

- No pipeline spills were documented and unregulated dumping appeared to be of inert solid waste.

- Regarding agricultural chemical issues, the assessment noted that the use of the area as farmland for over 100 years suggested the possibility that some toxic, persistent pesticides and pesticide residues, such as DDT, lead and arsenic, may be resident, and that use of fertilizers may result in elevated concentrations of phosphate, nitrates, and nitrites.

3.4 1991 Soil Contamination Study

A 1991 study by Shapiro and Associates was noted. This study looked into pesticide tissues associated with wetland mitigation proposals in the area southeast of Area 2. The sampling and analysis conducted in this study, which tested samples from

the upper 12 inches of agricultural soils, revealed that pesticides from past agricultural practices were present in the soils. The study apparently did not test for organochlorine pesticides (such as DDT, banned since the late 1970s), since their use was not reported by previous owners of the property, or for persistent residues of commonly used herbicides from earlier in the 20th century, such as arsenic, lead and other metals. Results from the Shapiro study indicated all samples contained some of the target pesticide analytes above detection limits, but concluded the probability of movement of these pesticides to the Swinomish Channel with wetland restoration was not likely given their short persistence and low toxicity.

The 2006 HWA assessment noted that agricultural chemicals commonly used prior to the 1970s included organochlorine pesticides (DDT, endosulfan, chlordane, etc.) and heavy metals (lead, arsenic, etc.), and that they were more persistent than the targeted analytes of the Shapiro study. However, HWA did not encounter evidence or documentation of the use of such compounds at the site, based on interviews with former landowners, as well as the reported negative testing by the Corps of Engineers of dredge spoils from the channel and Padilla Bay marine sediments for organochlorine pesticides or heavy metals.

3.5 Swinomish Marina Studies

Historically, the Tribe developed plans and conducted studies for the construction of a large marina in one of several potential locations on the reservation as an economic enterprise. Efforts to move forward with versions of this plan have been ongoing for nearly 30 years. In the 1990s, two environmental impact statements were prepared that addressed two separate preferred options for siting this marina. The most recent EIS involved constructing the marina in TEZ Area 2. The final EIS for this project was completed in 1996 and permits were obtained from the ACOE. Following this permitting, several years of related litigation ensued, primarily with Skagit County. Currently the marina project is tabled. If the project moves forward in the future, additional environmental studies may now be required, since in 2005 the US Fish and Wildlife service and the National Marine Fisheries Service (NOAA Fisheries) withdrew their previous “no effect” concurrence with the Biological Assessment associated with the marina plan.

This page blank

4.0 Reported Known, Suspected or Previous Environmental Conditions

4.1 On-Site Contamination Concerns.

Unregulated dumping/creosoted wood material: One large pile of creosote treated wood debris remains along the channel along the top of the dike. A deteriorating creosoted wood bulkhead armors the west side of the channel (Fig. 12). Additionally, the area along the channel near the bridge has historically been an uncontrolled dumping site. Although most debris has been removed, it is unknown if soils may have been contaminated. This location also previously contained structures and was likely a landing area.

Creosoted structures and debris are receiving an increasing amount of scrutiny in Washington State and elsewhere due to their potential for leaching contaminants into marine sediments and waters. For example, under funding provided by Governor Christine Gregoire's Puget Sound Initiative, the Washington DNR is coordinating creosote cleanup in various regions of Puget Sound. Additionally, many other public and private organizations have gotten on board with creosote cleanup efforts including the state Department of Transportation (at ferry system terminals). Creosote treated wood debris is regulated as RCRA hazardous waste. Washington State disposes of creosote treated debris in a landfill in Klickitat County, more than 200 miles from the Reservation. Despite regulations requiring RCRA disposal, the treated wood industry disputes the conclusion that creosote treated wood operational structures and debris constitute a significant environmental contamination issue. Notably, as of 2008, even new creosote-treated wood structures in marine waters are not prohibited in marine waters by the EPA or the Washington Department of Ecology.

Creosote-treated wood structures and debris are pervasive in the marine environment of Washington State and other areas of the country, and the marine areas of the Swinomish Reservation are no exception. It is not clear whether removal of many installed structures would do more harm than good, in that contaminated sediments that are currently deeply buried could be released into the water column during structure removal. Anecdotally, the barnacle and mussel covered creosote pilings on the reservation seem to be a useful substrate for marine life. Clearly, creosote debris on the Reservation that is easily removed, that is, debris that is lying free, should be disposed of. However, when weighed against other cleanup requirements, applying cleanup dollars to removal of old installed creosote treated wood structures may not be the best use of resources. There is a definite requirement for science and environmental policy to be more settled on creosote removal issues, because the wise use of limited cleanup dollars is at stake.

Figure 12. Erosion compromising bulkhead

Structures associated with the Knudson Farm: Area 2 was a working farm for many decades, and prior to 2004 contained as many as 8 buildings or trailers. No wells were reported by the former owner; although that seems somewhat unlikely given the cluster of farm buildings present. One septic tank was discovered and has since been buried under the pile of fill in the northern part of the area. Some of the debris from building demolition remains on site. The existence of asbestos or lead paint in this material is not known, although the remaining debris largely appears to be unpainted wood. Certainly some amount of petroleum products and agricultural chemicals would have been stored in these buildings; therefore the potential for soil contamination from spills exists. However, the portion of Area 2 where the farm structures existed is also the most likely area to be filled and developed as an economic area (paved or built over).

Chemical residues associated with agricultural use: The use of organochlorine and arsenical pesticides was common prior to the 1970s (organochlorine pesticides were developed during WWII, but arsenical herbicides were in common use prior to that). It is reasonable to assume these types of herbicides were used in Area 2 at some point. Additionally, the use of hard rock phosphate fertilizer, which was commonly used as an amendment in drained marsh soils, may have resulted in elevated soil cadmium levels. Debris sampled in Phase II testing of the lime storage site adjacent to Area 2 suggested that hard rock phosphate amendments may have been stored or processed there, and a tested debris pile had very high levels of cadmium (140 - 260 ppm). This is significant because these metals and organochlorine compounds can be very long lived in the environment. The elevated soil background levels of heavy metals noted in a study conducted after the P.M. Northwest site clean-up is consistent with the use of these types of chemicals. Similarly, local studies of toxic compounds in shellfish revealed elevated levels of arsenic and metals. A May 2000 Washington Department of Ecology study found DDT and breakdown components of DDT (p,p'DDE) in Swinomish Channel oysters sampled from the west bank of the channel, adjacent to agricultural lands. These substances are insoluble in water and tend to adsorbed by soil particles, particularly the silt loam soils in the area that are cultivated. Soil particles that erode can then carry these contaminants away through the drainage features. Given the minimal tidal flushing that

occurs behind the dikes, it seems likely that the fate of some contaminants from past farm operations may be sequestration in the freshwater wetland sediments of the area. Studies have shown that these persistent contaminants can exist for decades in wetland sediments. Additionally, the ecological fate of nutrient contaminants like phosphorus, nitrates and nitrites that pass into wetlands is often sequestration in the sediments. Given that wetlands are sinks for contaminants, the disturbance of these sediments caused by development or restoration activities, for example the restoration of tidal flushing that may occur in a salt marsh restoration, creates the potential for water quality issues. This would not only be a natural resource issue, but could potentially impact the feasibility or type of wetland mitigation required for economic development.

4.1 Off-Site Contamination Concerns.

Swinomish Tribal Economic Zone Area 1: This area is adjacent to the north end of Area 2. This site is being investigated as brownfields site by the Tribe with several potential areas of contamination. None of these sources in Area 1 is likely to be a source of contamination to Area 2, given the gradients and the distances involved.

PM Northwest Site: A potential off-site concern is contamination entering the area from the up-gradient P.M. Northwest site. However, this site has met all EPA cleanup requirements and a “No Further Action” letter was signed by EPA Region 10 in 2006. During the course of the cleanup it was discovered that a layer of relatively impermeable glacial till prevented contamination of aquifers, even given the substantial amount of contaminants that were present for decades at the dump site. Follow-up testing after the cleanup did not detect contaminants in the wetlands at the base of the bluff, down-gradient of the site, above background levels. The higher than expected background levels of certain contaminants, however, seems consistent with the potential agricultural sources discussed previously.

9655 Padilla Heights Road: This site is approximately 0.5 mile southwest of Area 1. It is listed on Washington State Department of Ecology’s CSCL and also by the Washington State Dept. of Health as former methamphetamine lab. It is ranked 5 on the CSCL (lowest priority for cleanup) and is awaiting remedial action. This site is assumed to present a low risk of contamination to Area 2.

This page blank

5.0 Site History

(Aerial Photos referenced in this section are located in Appendix A)

1937: The earliest aerial photography located is from 1937. An access road leads from SR 20 to a landing or pier on the channel south of the bridge. At least five farm structures are visible in the northeast section of Area 2. The large wetland along the western side of the area (Big Slough) reaches all the way to the SR 20 road embankment, which dikes it off from Padilla Bay. In the uplands atop the bluff on the west side of the area, much of the forest appears to have been clear cut.

1956: Dredge spoils are accumulating on top of the dike along the channel. Two pipeline right-of-ways are visible, crossing the northern part of the area.

1965: Much of the clear cut area previously noted atop the bluff has re-vegetated. The PM Northwest Dump Site is visible as several ponds atop the bluff approximately one thousand yards south of SR 20.

1966: The upper portion of the wetland on the western edge of the area (the Big Slough remnant channel) has been filled. The Knudson farm complex consists of 8 buildings and some other structures. Some additional structures are visible along the channel near the bridge, in what appears to be a landing area.

1975: A second highway bridge spans the channel south of the original span.

1978: The building(s) previously noted on the channel near the bridge appear to be gone, although some debris remains.

1994: A second new highway bridge now spans the channel and the original road and draw bridge have been removed. Debris is visible along the channel just south of the bridge. Some erosion is seen shoreward of the wooden bulkhead along the channel.

1998: No significant changes from 1994.

2001: The current pile of creosoted wood along the channel appears to be accumulating.

2003: The PM Northwest Dump Site is visible atop the bluff as an area that has had trees and soils removed during the cleanup process. An access road has been constructed on the south side of SR-20 that leads to a traffic roundabout near the bridge. In the previously uncultivated area between the farm buildings and the channel some grading has occurred over several acres.

2004: Structures associated with the Knudson farm operations have all been removed from the property.

2007: The large amount of debris previously visible along the channel near the bridge has been removed.

6.0 Regulatory Agency Database Review

The purpose of this section is to obtain and review records that may help identify recognized environmental conditions in connection with the subject property. The Swinomish Tribe contracted with Environmental Data Resources, Inc. (EDR) to conduct a review of regulatory databases. Appendix B contains the complete EDR report. Because of the size of the property, which included another area for which an assessment was being prepared (Tribal Economic Zone Area 1) all searches utilized the largest radius permitted by EDR for each search. Although the search was not centered on TEZ Area 2, the search radii for Area 2 for all databases met or exceeded the required “All Appropriate Inquiries” requirement.

A review of data available from regulatory agencies will provide useful information regarding the potential for contamination at or near a site. However, the databases are known to be incomplete and to contain numerous inaccuracies, with the result that positive or negative findings are subject to confirmation.

The EDR report did not map the known PM Northwest Dump site that underwent a CERCLA cleanup in 2001-2003. This may be a result of inadequate address information in database listings. The PM Northwest Site was listed on the EDR orphan site list. Information presented in Table 1 reflects information from the EDR database search as well as information for the PM Northwest Dump cleanup site and Washington CSCSL obtained separately from EPA and Washington DOE.

In Table 2, certain locations with information listed in the reviewed databases were expanded upon. Sites more than 1 mile from the closest boundary of TEZ Area 2 were deleted from the table, as well as sites down-gradient or in different drainages. The remaining sites in Table 2 are mapped in Figure 13. In cases of closely clustered sites, a letter is used delineate the cluster.

The PM Northwest Cleanup was considered the only site that represented a likely potential source of contamination to area, and is discussed in detail in section 4 of this assessment. It was not determined to be an REC for Area 2.

The remaining sites in Table 2 are properties with environmental permits for small quantity waste generation, USTs, storm water, etc, with no violations on record. These properties were not determined to be RECs for the subject property.

7.0 Environmental Consultant Site Reconnaissance

7.1 Environmental Consultant Site Reconnaissance (Environmental Intl. Ltd.)

This report supports Environment International, Ltd.'s (EI) work under its contract with the Swinomish Indian Tribal Community (Tribe) to provide assistance under the Tribe's Brownfields Assessment Grant with the U.S. Environmental Protection Agency. On May 15, 2008 EI conducted a site visit of the Swinomish Indian Tribal Community. The site visit was to conduct a visual site inspection of site previously identified by the Tribe for further possible sampling and follow-up to support the Tribe's evaluations. Recommendations contained in this report are informed only by the site visit and do not benefit from historical research which inform site review.

In project discussions, the Tribe has indicated that it will undertake its own historical research for areas of interest on-reservation. Historical research is important to ensure that the Tribe identifies issues that may not be obvious from a site visit. In addition, EI has suggested follow-up interviews with residents of the area to augment historical research; this suggestion was made in the context of one building, but it would be a useful exercise for each area visited as a part of the site visit. Interviews and historical research provide a better basis for Tribal decisions on future courses of action.

EI was represented by Aron Borok and Peter Graziani, and the Swinomish Tribe (Tribe) was represented by Jon Boe and Scott Andrews who escorted Aron and Peter to various locations throughout the reservation that may possess environmental hazards. The areas of concern included sites within four areas being investigated under the Tribe's Brownfields Grant: McGlenn Island, the Front Street Site, and Tribal Economic Zone (TEZ) Areas 1 and 2. This document describes sites visited in TEZ Area 2, the area's possible future uses, an evaluation of potential environmental contamination, and the recommended future actions. This evaluation is based only on visual observation.

Creosote Pile: The Creosote Pile in TEZ Area 2 is a wood debris pile of unknown origin. It is believed that the wood was treated with creosote, and that the creosote could have contaminated the soil surrounding the pile. The area is adjacent to a salmon habitat restoration area. EI's recommendation is to sample the soil surrounding the wood pile for TPH, TAL metals, and carcinogenic PAHs, and to investigate the area with a Photoionization Detector (PID). We recommend that the Tribe take two soil samples for each group of analytes.

Small Oil Spill: A discoloration of the soil exists in the TEZ Area 2 along a gravel road in an area that was formally used as farm land. It appears that the discoloration originated from an oil spill as a result of a person changing the oil from a vehicle, but the exact origin is unknown. The spill is rounded with a diameter of approximately 3 feet, and has not appeared to have seeped into the soil below the surface.

EI recommends that the soil affected by the spill be removed and discarded at an appropriate off-site location. There does not appear to be a need for sampling at this location.

Dumping Area: The former dump area within TEZ Area 2, adjacent to or within the highway right of way, was a former site of discarded debris. The debris has been removed, but there is a concern of remaining contaminants from the debris. The soil at the former site does not appear to be contaminated, and the debris has been completely removed. EI recommends that no further action is needed at this site.

Farm Buildings: A pile of unpainted wood debris exists on the site of a former farm house. The wood appears to be from the structure that once stood on the site, and is approximately 2 feet in height and 5 feet in diameter. EI does not recommend sampling in this area as contamination from the debris appears unlikely. The debris should be removed and recycled before development of the site.

8.0 Phase I ESA Findings and Conclusions

8.1 Areas of potential contamination determined from the Phase I assessment.

Sources of potential contamination investigated in this assessment include on-site and off-site sources that could be contributing to contamination in TEZ Area 2.

8.2 On-site potential sources of contamination.

8.2.1 Creosote-treated wood debris pile (REC).

The creosote treated debris by the channel meets the definition of RCRA hazardous waste and should be cleaned up and disposed of accordingly. What is not clear is whether leached compounds from this pile have contaminated the soil on the top of the dike. Phase II sampling of the soil beneath the pile for contaminants (primarily cPAH compounds) is recommended. Since creosote treated wood debris is common on the Reservation, this testing would provide useful information on whether creosote cleanup is likely to extend beyond just the disposal of the surface debris.

8.2.1 Wetland sediment contamination (REC)

If agricultural pesticides and fertilizers containing persistent contaminants (for example DDT, arsenical herbicides, and hard rock phosphate amendments) were used in the past in the cultivated areas in Area 2, which seems likely, it is also likely that some level of these contaminants is still contained in the sediments of the current wetlands, along with persistent nutrients such as phosphorus. Sequestering such compounds is an important function of freshwater wetlands; only in the case where these sediments would be released to the marine environment would this potentially become a problem. If the salt marsh restoration plan contemplated for the mitigation area will result in the release of bottom sediments from the current freshwater wetlands, Phase II testing of the applicable sediments should be conducted for persistent contaminants (or nutrients) that may have accumulated such as heavy metals, DDT compounds, and total phosphorus.

8.2 Off-site potential sources of Contamination.

8.2.1 PM Northwest Site (not an REC)

Contamination from the P.M. Northwest site does not seem likely, given the data from previous cleanup operations and the follow-up testing performed.

8.3 Data Gaps.

- It is not known whether persistent pesticides and soil amendments such as arsenical herbicides and DDT may have been applied to the farmlands in Area 2 in the past.

- The source of the elevated background levels of priority metals in Area 2 agricultural soils and wetland sediments noted in previous studies of the area is not known.

8.4 Conclusions

Because TEZ Area 2 is adjacent to the Swinomish Channel and includes critical current and future habitat for endangered salmonids, it is an environmentally sensitive area. Natural resources in the area are important to both the Swinomish Tribe, local non-Indians, and the general population. Since resources like shellfish and salmon tend to bioaccumulate some toxic compounds, even low levels of certain contaminants, over time, can present a risk to these resources. Because the Swinomish consume shellfish and fish at a rate many times that of non-Indians, contamination of the local marine environment presents a particularly serious potential health issue to them.

Because of the potential for contamination from sources in Area 2 referenced in this assessment it is recommended that a sampling and analysis plan be developed to investigate the on-site concerns noted. Specifically this might involve:

- Phase II testing of soils below the creosote debris pile along the channel for cPAH contamination.

- Phase II sampling of wetland sediments for persistent residues from banned herbicides or other substances that may impact water quality if released during wetland restoration efforts (DDT compounds, TAL metals and total phosphorus).

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/06/2008 has revealed that there are 3 RCRA-CESQG sites within approximately 2 miles of the target property.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 03/06/2008 has revealed that there are 4 RCRA-NonGen sites within approximately 2 miles of the target property.

EXECUTIVE SUMMARY

US CDL: A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

A review of the US CDL list, as provided by EDR, and dated 09/01/2007 has revealed that there is 1 US CDL site within approximately 1 mile of the target property.

9655 PADILLA HEIGHTS ROAD	9655 PADILLA HEIGHTS RO	1/2 - 1 WNW B10		13

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 04/03/2008 has revealed that there are 3 FINDS sites within approximately 1 mile of the target property.

STATE AND LOCAL RECORDS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the SHWS list, as provided by EDR, and dated 02/12/2008 has revealed that there are 2 SHWS sites within approximately 2 miles of the target property.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WA-DOEFSIS (Washington - Department Of Ecology Facility / Site Identification System) is the Department of Ecology's Facility/Site identification system that provides a means to query and display data maintained by the Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the departments Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Other Pertinent Environmental Activity Identified at Site

WA-DOEFSIS (Washington - Department Of Ecology Facility / Site Identification System) is the Department of Ecology's Facility/Site identification system that provides a means to query and display data maintained by the Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the departments Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

WA MANIFEST:

Facility Site ID Number: 32674489
Permit by Rule: No
Treatment by Generator: No
Mixed radioactive waste: No
Importer of hazardous waste: No
Immediate recycler: No
Treatment/Storage/Disposal/Recycling Facility: No
Generator of dangerous fuel waste: No
Generator marketing to burner: No
"Other marketers (i.e., blender, distributor, etc.)": No
Utility boiler burner: No
Industry boiler burner: No
Industrial Furnace: No
Smelter defferal: No
Universal waste - batteries - generate: No
Universal waste - thermostats - generate: No
Universal waste - mercury - generate: No

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WA-DOEFSIS (Washington - Department Of Ecology Facility / Site Identification System) is the Department of Ecology's Facility/Site identification system that provides a means to query and display data maintained by the Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the departments Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 01/31/2008	Source: EPA
Date Data Arrived at EDR: 02/08/2008	Telephone: N/A
Date Made Active in Reports: 03/17/2008	Last EDR Contact: 04/28/2008
Number of Days to Update: 38	Next Scheduled EDR Contact: 07/28/2008
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/31/2008	Source: EPA
Date Data Arrived at EDR: 02/04/2008	Telephone: N/A
Date Made Active in Reports: 03/17/2008	Last EDR Contact: 04/28/2008
Number of Days to Update: 42	Next Scheduled EDR Contact: 07/28/2008
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 01/31/2008	Source: EPA
Date Data Arrived at EDR: 02/08/2008	Telephone: N/A
Date Made Active in Reports: 03/17/2008	Last EDR Contact: 04/28/2008

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 05/19/2008
Number of Days to Update: 56	Next Scheduled EDR Contact: 08/18/2008
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/08/2008	Source: EPA
Date Data Arrived at EDR: 04/25/2008	Telephone: 703-412-9810
Date Made Active in Reports: 05/21/2008	Last EDR Contact: 04/25/2008
Number of Days to Update: 26	Next Scheduled EDR Contact: 06/16/2008
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 12/03/2007	Source: EPA
Date Data Arrived at EDR: 12/06/2007	Telephone: 703-412-9810

Number of Days to Update: 76	Next Scheduled EDR Contact: 06/16/2008
	Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 02/08/2008	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/07/2008	Telephone: 202-564-6023

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/26/2008	Source: EPA
Date Data Arrived at EDR: 04/02/2008	Telephone: 800-424-9346
Date Made Active in Reports: 05/06/2008	Last EDR Contact: 06/02/2008
Number of Days to Update: 34	Next Scheduled EDR Contact: 09/01/2008
	Data Release Frequency: Quarterly

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/06/2008
Date Data Arrived at EDR: 03/06/2008
Date Made Active in Reports: 04/18/2008
Number of Days to Update: 43

DOT OPS: Incident and Accident Data

Department of Transportation, Office of Pipeline Safety Incident and Accident data.

Date of Government Version: 02/14/2008	Source: Department of Transportation, Office of Pipeline Safety
Date Data Arrived at EDR: 02/27/2008	Telephone: 202-366-4595
Date Made Active in Reports: 03/20/2008	Last EDR Contact: 05/28/2008
Number of Days to Update: 22	Next Scheduled EDR Contact: 08/25/2008
	Data Release Frequency: Varies

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 04/01/2008

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 04/03/2008	Source: EPA
Date Data Arrived at EDR: 04/08/2008	Telephone: (206) 553-1200
Date Made Active in Reports: 05/06/2008	Last EDR Contact: 03/31/2008
Number of Days to Update: 28	Next Scheduled EDR Contact: 06/30/2008
	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

STATE AND LOCAL RECORDS

CSCSL: Confirmed & Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 02/12/2008	Source: Department of Ecology
Date Data Arrived at EDR: 02/14/2008	Telephone: 360-407-7200

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CSCSL NFA: Confirmed & Contaminated Sites - No Further Action

The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

Date of Government Version: 03/17/2008	Source: Department of Ecology
Date Data Arrived at EDR: 04/08/2008	Telephone: 360-407-7170

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

TACOMA/PIERCE COUNTY:

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation

Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Daycare Center Listing

Source: Department of Social & Health Services

Telephone: 253-383-1735

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION</u> <u>FROM TP</u>	<u>GENERAL DIRECTION</u> <u>GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Tacoma

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 5 Min: 3.5
2	9 inches	50 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 5 Min: 3.5
3	50 inches	59 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 5 Min: 3.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Tacoma

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 61 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 5 Min: 3.5
2	9 inches	33 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 5 Min: 3.5

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Wells

Telephone: 360-236-3148

Group A and B well locations.

OTHER STATE DATABASE INFORMATION

RADON

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration
